

iPhone Application Programming - Winter Semester 2012/13

Assignment 1: iCalc

In this assignment, you will learn how to write your first own simple application, a calculator.

Your task We provide you with a template for a calculator that already adds numbers (at least 1 and 2). (Download the template at <http://hci.rwth-aachen.de/iphone12>)

Take a close look at the implementation of this template and write the necessary code to have a fully working calculator.

Extra Credit

For extra credit implement the following points (each of it will give you 2 extra points):

- Adapt the number of shown decimals to the actual result that is to be displayed.
- Visualize the currently active operation by letting the button be pushed until the second operand is entered.
